Expert Workshop in support of the CPF Joint Initiative on Streamlining Forest-related Reporting: Strengthening the Global Core Set of Forest Indicators to support the implementation of the 2030 Agenda and the UN Strategic Plan for Forests 2030

22-24 October 2019 at FAO, Rome

Background

The United Nations Strategic Plan for Forests 2030 contains six Global Forest Goals (GFG) and 26 associated targets to be achieved by 2030. It provides a global framework for action at all levels, aiming at contributing to progress on the Sustainable Development Goals, including the related targets of CBD, UNFCCC, UNCCD and other international forest-related instruments, processes, commitments and goals.

In order to help streamline action and reduce the reporting burden on countries, the Collaborative Partnership on Forests (CPF) has developed a Global Core Set (GCS) of Forest related Indicators. The GCS consists of 21 indicators, which address efficiently and comprehensively the topics identified in high level political commitments on forests. They address the same time address forest related aspects of SDG indicators, in particular SDG 15 “Life on Land”.

The GCS indicators are classified as Tier 1, Tier 2 or Tier 3 based on the existence of an agreed methodology and the availability of comparable data (see Annex). Tier 1 indicators are those for which data can be readily collected. Tier 2 indicators may require additional efforts but are manageable through various data sources. Tier 3 indicators are those for which data is generally lacking and data collection poses significant challenges. Of the four Tier 3 indicators, three deal with socio-economic and financing issues directly related to reporting on GFG 2.1 on eradicating extreme poverty for forest dependent populations, GFG 2.3 on the contribution of forests and trees to food security, and GFG 4.1 and 4.2 on mobilizing significant resources and increasing forest-related financing from all sources.

UNFF13, in 2018, welcomed the progress made in developing the GCS, acknowledging the value of such a set in assessing progress and in better focusing data collection efforts in order to reduce duplication. It encouraged applying indicators ready for use, and requested the CPF to continue to develop the remaining indicators and report on progress in that regard to the Forum at its fourteenth session in 2019.

At its twenty-fourth session, in 2018, the FAO Committee on Forestry (COFO) acknowledged the progress made on the Global Core Set of forest-related indicators and invited the Forum and the governing bodies of the member organizations of the CPF to consider the use of tier 1 and tier 2 indicators in their reporting processes. The COFO requested FAO to continue working with the CPF on further development of tier 2, tier 3 and “candidate” indicators of the global core set and continue to report on progress in that regard, including at UNFF. Work related to the Global Core Set of indicators was subsequently endorsed by the FAO Council in December 2018.

The development of a platform with online tools for the collection and dissemination of socioeconomic data relating to forest-dependent people and the contribution of forests to food security was also suggested. In addition, participants stressed the need for greater coordination with national statistical offices, using the increased understanding of the relationships between forests and poverty eradication
and food security to design appropriate national census questions.

At UNFF14, many delegates indicated satisfaction with the progress reported on developing a Global Core Set of forest indicators to be used in national reporting, capacity-building efforts for national reporting, efforts to raise awareness about the GFGs, and synching cooperation and enhancing collaboration among CPF organizations. The UNFF14 Chair’s summary specified an expert meeting on further improving indicators of the core set as part of plans for intersessional activities on the road to UNFF15. At UNFF15 (2020), the Forum will consider the results of this first round of reporting, as well as the timing of the next round of reporting.

**Goal and Objectives**

The overarching goal of the Expert Workshop (EWS) is to review progress on the Global Core Set of forest indicators and develop recommendations to make full use of the set, particularly by further improving methodology and data availability of selected indicators.

The specific objectives are:

- to take stock of progress and existing gaps related to methods and data needed to use the Global Core Set for measuring progress towards Global Forest Goals and SDGs at national, regional and global levels;
- to discuss and develop recommendations and proposals for selected “Tier 3” GCS forest indicators for which both methodology and data availability challenges exist: definition, classifications and other metadata specifications; possible national approaches for data collection/generation; piloting:
  - Indicator 13 (Number of forest dependent people in extreme poverty)
  - Indicator 14 (Contribution of forests to food security)
  - Indicator 15 (Financial resources from all sources for implementation of SFM)
- to discuss and develop recommendations for selected “Tier 2” global core set of forest indicators (methodology is sound but data challenges still exist): addressing data availability issues, national approaches for data collection/generation through existing structures and mechanisms, data generation through analytical tools; possible pilot studies;
  - Indicator 10 (Wood based energy share of total final energy consumption)
  - Indicator 12 (Employment related to the forest sector)
- to discuss and develop recommendations on next steps/roadmap to further develop methodology and data availability on Tier 3 and Tier 2 indicators and to share views and discuss possible actions on enhancing the use of GCS indicators.

**Expected deliverables and results**

The expected deliverable of the Expert Workshop is a report to the CPF Task Force on streamlining forest-related reporting:

- the current understanding of methodological and data issues of selected Global Core Set of forest indicators classified as Tier 3 and Tier 2;
- recommendations on methodological specifications of selected Tier 3 indicators, particularly internationally agreed definitions and methodologies for data collection and analysis;
- recommendations on ways to considerably enhance data availability at national levels, particularly through better utilizing existing structures and mechanisms for data collection, analysis and reporting;
recommendations and proposals for further work on Tier 3 and Tier 2 indicators and outlook on steps needed to utilize the full potential of the Global Core Set of Forest-related Indicators at all levels.

The expected result of the meeting is advise to the CPF Task Force in developing the GCS further to effectively enhance the ability of countries and organizations to use and report on the Global Core Set of Forest-related Indicators, further strengthening evidence-based decision-making and streamlining global reporting on forest-related aspects.

Venue
FAO Headquarters, Rome

Date
22-24 October 2019

Participation
The EWS is a meeting of technical experts. Participation is by invitation, drawn from all Member States, CPF members, representatives of international and regional organizations/processes, UN system organizations/agencies/programmes/commissions, other relevant entities and processes, including criteria and indicators processes, major groups and other interested stakeholders. It is anticipated that the meeting will bring together 80-100 (?) participants.

Structure of the event
The structure will combine the following elements:

- Background paper focusing on the global core set Tier 3 and Tier 2 indicators:
  - Progress in further developing methodologies of GCS indicators, existing gaps, and ways to address them
  - Progress in further improving data availability on GCS indicators, existing gaps, and ways to address them
- Parallel work sessions will be designed around specific indicators
  - Short presentations of a specific note on method and data availability considerations and options per indicator to frame the discussion;
  - Discussions and elaboration of recommendations in Working Groups;
- Plenary sessions to validate working group results and discuss elements of the report, including recommendations;
- Plenary session to discuss further work, incl. promotion of up-take and related experience sharing and capacity development

The detailed agenda and schedule will be elaborated by the Steering Committee. The event will be held in English, with simultaneous interpretation in English, French and Spanish in plenary sessions.
Steering Committee

A Steering Committee of selected members of the CPF Taskforce on streamlining forest-related reporting (UNFF, FAO, World Bank, UNFCCC Secretariat, IUFRO as well as CIFOR/ICRAF), guides the work by:

- Deciding/approving main issues to frame meetings (themes and sub-themes)
- Deciding/approving draft agenda and detailed schedules
- Overseeing the selection of panelists, speakers, etc.
- Providing financial oversight
### Annex II

**Draft global core set of forest-related indicators**
